Glory Alphonsus

Fullstack Developer

I am a skilled fullstack developer with experience in building complex web applications from scratch using various programming languages and frameworks such as JavaScript (MERN Stack), Python (Django), and PHP (Laravel). I have a proven track record of quickly learning and adapting to new technologies, which enables me to deliver top-notch results.

I've completed several successful projects working with teams and working solo. I take pride in my communication and collaboration skills, and I'm passionate about problem-solving and innovation.

Address
Lagos, Nigeria

Education

2023
B.Agric   First Class
Federal University of Agriculture, Abeokuta

Expertise

- Javascript (Mern Stack)
- PHP (Laravel)
- Python (Django)
- SQL
- HTML
- CSS
- Git & Github
- GraphQL, REST API
- Figma, Figjam
- Collaborating with front-end
- Excellent Communication skills

Experience

Luna Africa   July 2023 - present

Backend Developer

In my current role at Luna Africa, I oversee the backend development for both the company's website and app. This includes writing APIs and implementing backend functionalities using Node.js for the app and PHP for the website, ensuring seamless integration and efficient operations.

Playpesa   April 2023 - June 2023

Backend Developer Intern

As a backend developer at the firm, my primary responsibility is to develop and maintain the GraphQL API for a football gaming app. I specialize in using Express.js and MongoDB to handle data storage and retrieval efficiently. Additionally, I leverage Socket.IO to enable real-time communication and enhance the interactive features of the application.

Specifically, my key tasks include:

1. Designing and implementing GraphQL schemas, resolvers, and mutations to facilitate efficient data querying and manipulation.
2. Developing robust RESTful endpoints using Express.js to handle HTTP requests and responses.
3. Integrating MongoDB as the database management system to store and retrieve game-related data, such as player statistics, team information, and match results.
4. Ensuring data consistency, integrity, and security through effective database modeling, indexing, and validation techniques.
5. Collaborating closely with the frontend team to define and fulfill API requirements, ensuring seamless integration between the client and server components.
6. Implementing real-time functionality using Socket.IO to enable features like live score updates, chat functionality, and game notifications.
7. Conducting thorough testing, debugging, and performance optimization to deliver a stable and high-performing API.
